                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               71
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid encoding an Moraxella catarrhalis polypeptide. The nucleic acid is useful for preparing a composition for diagnosing, preventing or treating infection caused by Moraxella catarrhalis. The present sequence represents the amino acid sequence of a M. catarrhalis protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |::| |::| |::|| ||:||| ||:||| ||:||| ||:||| ||:||| PNQSG---YYPITTGANAFAARSTLTDVANQSIDIQYYIWHNDEAGQLMLKDLWEAADRG

This sequence is a H. pylori secreted protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. C. a vaccine to prevent or treat H. pylori infection or to identify H. Dylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The DNA and probes derived from it may be used for the identification of H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and can be used to prevent the translation of H. pylori mRNA. Antibodies against the protein can be used in immunoassays to evaluate the abundance and distribution of H. pylori-specific artigens. The sequences of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify clikely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant complete mined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide to production, e.g. in E. coli hosts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Helicobacter pylori nucleic acid sequences and encoded polypeptide(s) useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 14,94; Page 659-660; 1145pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is a H. pylori secreted protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. 20 a vaccine to prevent or treat H. pylori infection or to identify H. 20 pylori polypeptide binding compounds, useful as potential H. pylori life cortivators or inhibitors. The DNA and probes derived from it may be used for the identification of H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and can be used to prevent the translation of H. pylori mRNA. Antibodies against the protein can be used in immunoassays complements and distribution of H. pylori-specific antigens. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial CC from overlapping contigs generated by mechanically shearing the bacterial CC the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid complements protein sequences of interest, particular regions can be complemented from various OKF were analysed for significant con the predicted coding regions defined membrane proteins. Having identified and determined the sequences of interest, particular regions can be considered from H. pylori by PCK amplification for recombinant polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Helicobacter pylori nucleic acid sequences and encoded polypeptide(s) useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection.

                     inversion. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastris, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          90
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for baumannii present sequence represents the amino acid sequence of an A. baumannii protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                :|| ||||| ||: ||: |||: |||||||| || ||: ||: |||: |||: |||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: |||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: ||||: |||: |||: |||: |||: |||: |||: |||: |||: |||: |||: |||: ||: |||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: |
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        80 DDPHEALAARAALIESAEHSLDLQYYIWRNDISGRLLFNLMYLAAERGVRVRLLLDDDNNT

```
The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test blant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmotic stress cany of their combinations. The present sequence is used in the exemplification of the invention
                                                                                                                                                           responsiveness of a plant, e.g. cereal, to stress, salt stress or osmotic stress.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           79
                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.

The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention

The nucleic acid of the invention may be useful in detecting the presence of Xanthomonas bacteria in a sample, as well as in plant pathology, for example, for caused by bacterial persers. The current sequence is that of the Xanthomonas axonopodis pv. citri (Xac) plant pathology-related XAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SCSSWLPPLEERTESRHFNTSKPVLLDNILQIRHTPHNNGLSDIYLLDDPHEALAARAAL 92

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   392 KAGIKLYELQPNHAVPATKDKGLTGSSVTSLHAKTFIVDGKRIFIGSFNLDPRSARLNTE 451

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                           The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and Losynthesis and blodegradation, especially bloosynthesis of vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes. related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related organisms. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WiPo at the printed specification, but was obtained in electronic format directly from WiPo at the companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LDDPHEALAARAALIESAEHSLDLQYYIWRNDISGRLLFNLMYLAAERGVRVRLLLDDNN 138

The invention describes an isolated nucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as concoding an Staphylococcus epidermidis polypeptide with any ector; a cell comprising a recombinant expression vector of [1]; producing an S. epidermidis polypeptide, an isolated nucleic acid comprising a nucleotide sequence of at least 8 nucleotides in length; a vaccine composition for prevention or treatment of an S. epidermidis infection, comprising a nucleic acid cited above and a carrier; treating a subject for S. epidermidis infection; a recombinant or substantially pure preparation of an S. epidermidis polypeptide or its fragment; a subject for S. epidermidis infection; a recombinant or substantially coverine composition for prevention or treatment of an S. epidermidis infection; detecting the presence of a Staphylococcus mucleic acid in a sample; a computer readable medium having recorded in it the nucleotide sequence with SEQ ID NO: 1-3772 or its fragments; a computer based system for identifying fragments of the Staphylococcus genome of system for identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids; and identifying an expression modulating compositions of the present invention are useful for the diagnosis, prevention and/or treatment of an Staphylococcal epidermidis bacterial infection. This is the amino acid sequence of a S. epidermidis protein of
antibacterial; vaccine; antisense therapy; Staphylococcus epidermidis; recombinant expression vector; infection; computer readable medium; computer based system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing and/or treating an S. epidermidis bacterial infection.

```
The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for blosynthesis and blodegradation, especially blosynthesis of Vitemain Bl.2. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related organisms. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               476
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             401

The invention relates to identifying antimicrobial agents that target the proteins (ABB3491-1ABB3494) encoded by genes (ABA51623-ABA51634) and ABA51659-ABA51670) essential for the survival of Staphylococcus bacteria, especially Staphylococcus aurents, including antimicrobial agents that interfere with the expression of essential coding sequence products and antimicrobial agents that interfere with the function of essential coding sequence products. The genes and proteins are useful for identifying agents that decreases the growth rate of a microbe preferably S. aureus. The agents identified by the above method are bactericidal and will be useful for treating a subject infected with S. aureus or at risk of being infected by S. aureus and may be used in vaccines for producing sequence is that of a protein encoded by an essential S. aureus polynucleotide coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EYFKVGEDTVFADLDILATGSVVGEVSHDFDRYWASHSAHNATRII------RSGNIGK 258

                                                                                                                                                                       468
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptide from Staphylococcus aureus by contacting a polypeptide and an agent to form a mixture and determining whether the agent binds the polypeptide. The method is useful in identifying agents that bind gene products critical for the survival of microbes, preferably staphylococcus microbes, including agents that interfere with the function of such gene products. The method is used to identify new agents useful for treating or preventing bacterial infections, particularly those caused by antibiotic-resistent bacteria. This sequence represents a protein from Staphylococcus aureus of the invention.

The invention discloses a method for identifying an agent that binds a polypeptide and an agent to form a mixture and determining whether the agent binds the polypeptide. Also claimed is a method for identifying an agent that decreases the growth rate of a microbe, making a Staphylococcus aureus with reduced virulence, which comprises altering a cading sequence in an S. aureus to introduce a mutation, a vaccine composition comprising the S. aureus organism with reduced virulence. The methods are useful for identifying an agent that binds a polypeptide, useful in treating (e.g. as a vaccine) bacterial infections, particularly those caused by antibiotic-resistant bacterial nections, particularly those caused by antibiotic-resistant bacterial of articularly bacteraemia, septic shock and serious metastatic infections virtually any organ, skin rashes, food poisoning or multisystem dysfunction, i.e. toxic shock syndrome. The inventive method identifies agent that are unrelated to existing antimicrobials and that target different aspects of staphylococcal invasion of and replication in the lost. The sequence presented is one of the S. aureus polypeptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              16;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DRRKPPIAGRLQDALKQPEKSVYLVSPYFVPTKSGTDALAKLVQDGIDVTVLTNSLQATD 375
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes isolated polynucleotides from Staphylococcus aureus comprising one of the seventeen nucleotide sequences fully disclosed in the specification. The invention is used to find agents that bind gene products critical for the survival of microbes, particularly Staphylococcus aureus and are therefore useful to treat bacterial infections particularly those caused by antibiotic-resistant bacteria. This is the amino acid sequence encoded by an unknown coding region from

The invention relates to identifying antimicrobial agents that target the proteins (ABB32471-ABB32494) encoded by genes (ABB51623-ABB51634 and ABB31624-ABB51670) essential for the survival of Staphylococcus bacteria, especially Staphylococcus aureus, including antimicrobial agents that interfere with the expression of essential coding sequence products and artimicrobial agents that interfere with the function of essential coding sequence products. The genes and proteins are useful for identifying agents that decreases the growth rate of a microbe preferably S, aureus. The agents identified by the above method are bactericidal and will be useful for treating a subject infected with S, aureus or at risk of being infected by S. aureus and may be used in vaccines for producing immunological response to S. aureus resulting in immunity. The present sequence is that of a protein encoded by an essential S, aureus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                polypeptide from Staphylococcus aurenes by contacting a polypeptide and an agent to form a mixture and determining whether the agent binds the polypeptide. The method is useful in identifying agents that bind sene products critical for the survival of microbes, preferably staphylococcus microbes, including agents that interfere with the function of such gene products. The method is used to identify new agents useful for treating or preventing bacterial infections, particularly those caused by antibiotic-resistant bacteria. This sequence represents a protein from Staphylococcus aureus of the invention when the corresponding gene is cloned into the expression vector pDE-60 or pOR-70. This encoding gene sequence corresponds to the essential gene shown in ADC21335.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 469

The invention discloses a method for identifying an agent that binds a polypeptide which comprises mixing a polypeptide and an agent to form a mixture and determining whether the agent binds the polypeptide. Also claimed is a method for identifying an agent that decreases the growth that comprises altering a coding sequence in an S. aureus to introduce a which comprises altering a coding sequence in an S. aureus to introduce a matation, a vaccine composition comprising the S. aureus organism with reduced virulence. The methods are useful for identifying an agent that binds a polypeptide, useful in treating (e.g. as a vaccine) bacterial infections, particularly those caused by antibiotic-resistant bacterial confidencially whose caused by antibiotic-resistant bacterial particularly bacteraemia, septic shock and serious metastatic infections or including endocarditis, arthritis, osteomyelitis, pneumonia, abscesses in virtually any organ, skin rashes, food poisoning or multisystem dysfunction, i.e. toxic shock syndrome. The inventive method identifies agents that are unrelated to existing antimicrobials and that target different aspects of staphylococcal invasion of and replication in the host. The sequence presented is one of the S. aureus polypeptides of the EYLGLGKLGYWRDTHLRIQGDAVDALQLRFILDWNS-QAHRPQFEYDVKYFPKKNGPLG- 312 GLQALGYNDETSRHALLRYRETVEQSPLYQKIQTGRIDWQSVQ---TRLISDTPAKGLDR 315 ...-iKN 96 AEHSLDLQYYIWRNDISGRLLFNLMYLAAERGVRVRLLLLDDNNTRGLDDLLLALDSHPNI EVRLFNPFVLRKWRALG-----YLTDFP----RLNRRMHNKSFTADNRATILGGRNIGD EYFKVGEDTVFADLDILATGSVVGEVSHDFDRYWASHSAHNATRII------RSGNIGK 42 EERTESRHFNTSKPVLLD-----NILQIRHTPHNNGLSDIYLLDDPHEALAARAALIES identification of agent that binds polypeptide, for treating bacteria infections, particularly caused by antibiotic-resistant bacteria, involves mixing polypeptide and agent, and determining whether agent binds polypeptide. 10.5%; Score 286.5; DB 7; Length 502; 21.1%; Pred. The invention is used to find agents the bind gene products critical for the survival of microbes, particularly Staphylococcus aureus and are therefore useful to treat bacterial infections particularly those caused by antibiotic-resistant bacteria. This is the amino acid sequence encoded by an essential coding region from the Staphylococcus aureus genome.

```
nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                           168

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent electronic format directly from WIPO at the wipo.int/pub/published_lect.sequences. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               214
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          475
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    177

The invention relates to a substantially purified nucleic acid molecule encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in a plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest. Sequences given in records for SEQ 105 9692-16825 represent a group of 7134 Mxyococcus xanthus proteins and peptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO

This sequence is a Helicobacter pylori protein of unspecified function.

The protein may be used in a vaccine to prevent or treat H. pylori

The protein may be used in a vaccine to prevent or treat H. pylori

The protein or to identify H. pylori polypeptide binding compounds, useful

as potential H. pylori life cycle activators or inhibitors. The DNA and

probes derived from it may be used for the identification of H. pylori infection. Nucleic acid

a sample, and the diagnosis of H. pylori infection. Nucleic acid

sequences complementary to the DNA act as antisense sequences, and can be

used to prevent the translation of H. pylori mRNA. Antibodies against the

sprotein can be used in immunoassays to evaluate the abundance and

distribution of H. pylori-specific antigens. The genomic sequence of H.

Cylori (ATCC 55679) was determined from overlapping contigs generated by

mechanically shearing the bacterial DNA. The sequences were analysed for

mechanically shearing the bacterial DNA. The sequences were analysed for

CRF of at least 180 nucleotides, and the predicted coding regions defined

Cy computer evaluation. To identify likely H. pylori antigens for vaccine

development, the amino acid sequences predicted from various ORF were

CC analysed for significant homology to other known or exported membrane

Cy poteins. Having identified and determined the sequences of interest,

particular regions can be isolated from H. pylori by PCR amplification

cy for recombinant polypeptide production, e.g. in E. coli hosts

                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polymorphisms encoded by the genes are used for detection/identification of the genes are used for detection/identification of arry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and Ab are also useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            413
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DGKRIFIGSFNLDPRSARLNTEMGVVIESPKIAEQMERTLADTTPEY---AYRVTLDKHN 486
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     86
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            : | |: | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | | : | : | | : | | : | : | | : | : | | : | : | | : | : | | : | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | :

The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular tragets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as templates for antibacterial drugs, including anti-P. aeruginosa-derived peptides or polypeptides, as target production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa caused infection, and in detection of P. aeruginosa sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CRB084196 represent P. aeruginosa charpeptides of the invention. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      186 WRPWVEEALAARQVSGYKG--LKALVRMTRTPTLANN---RVRLLVNGEASFEAMFKAIS 240

The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11;

                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             membrane construction and membrane transport protein, petroleum spill, hydrocarbon degradation, gram positive aerobic bacterium, marker, identification, microorganism, fine chemical production; transformation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation. AAF68082 and AAF68082 represent sequencing primers which are used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Corynebacteium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation.

are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lyaine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office 8888888888888888

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
TITLE REPERENCE: GTC99-03P4
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 5559
LENGTH: 271
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GENERAL INFORMATION:

Sequence 23909, Application US/09252991A

Patent No. 6521795

GENERAL INFORMATION:
APPLICANT MACC J. RUbenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR PRILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
